g band: what could the two modes be?
colour of the calibration stars
1e6
epochs
$c_{\rm rel}$ (mag)
airmass of the epochs
1e6
tan z
split by airmass
tan z < 0.6: slope 30.9
tan z ≥ 0.6: slope 32.5
offset along parallactic dir. (mas)
$x = c_{\rm rel} \tan z$ (mag)
split by colour
$c_{\rm rel}$ < 0.10 (blue): slope 40.6
$c_{\rm rel}$ ≥ 0.10 (red): slope 26.1
$x = c_{\rm rel} \tan z$ (mag)
